

OpenGL Whiteboard

ENGR 165 | Spring '18

Project Overview: Graphics Editor

*Goal: Implemented a
Microsoft Paint-like app*

- OpenGL-based graphical interface

Features:

- Free-hand draw using the Pencil tool
- Color Palette with 8 unique colors
- Shape resizing
- Selection animations
- Eraser tool

Project Dependencies

Graphics Editor Dependencies

Graphics Editor Dependencies

OpenGL

- + Cross-platform application programming interface (API) for rendering 2D & 3D vector graphics

C++

ISO standard programming language that allows for direct control over system memory

- ◇ Useful for pointers

SOIL

Simple OpenGL Image Loader

- + Cross-platform image loader
- + Can read a variety of image formats:
 - + BMP
 - + JPEG
 - + PNG

Project Stats

4,037 lines

Of code added to the OpenGL boilerplate

14 commits

To achieve our MVP

10 classes

Custom to our graphics editor

WHAT WE LEARNED: VERSION CONTROL

In order to maintain code consistency across all of our devices, we had to use *Git* version control

VERSION CONTROL: GIT WORKFLOW

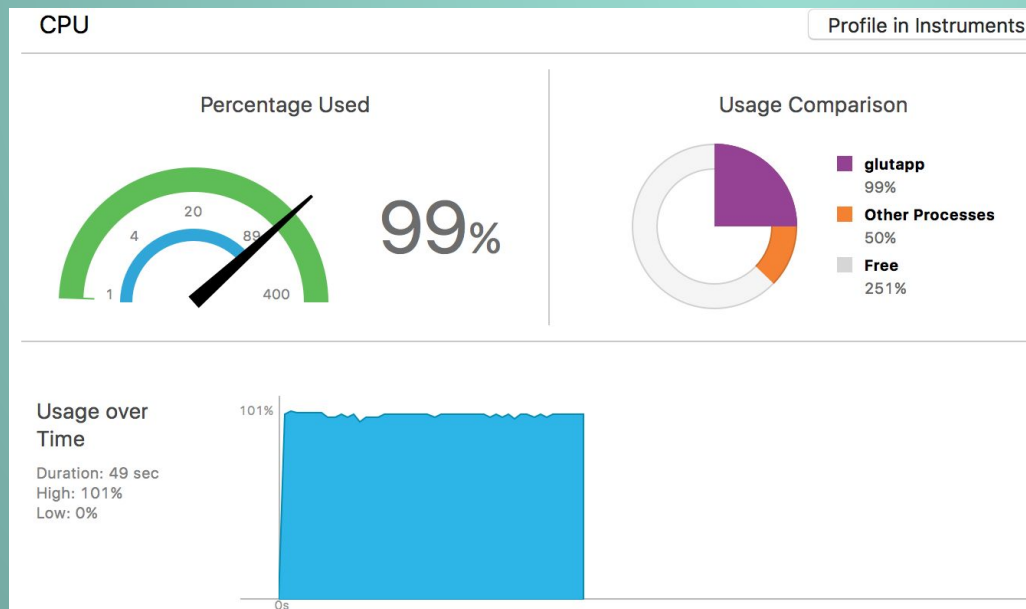

All code changes were first pushed to the `cold` branch.
Commits were then *peer-reviewed* and merged into the `hot` branch
Finalized versions were pull requested into `master`

A person wearing a red sweater is seated at a light-colored wooden table. They are writing on a white document with a black pen. Their left hand rests on the document. A brown leather suitcase is on the table to the left. A watch with an orange face is on their left wrist. In the background, a laptop and some books are visible.

FUTURE WORK + NEXT STEPS

THINGS TO IMPROVE ON

- ◇ Runtime performance and memory management
- ◇ Sticker packs (emojis/faces)
- ◇ Custom whiteboard backgrounds
